INFORMATION AND SOFTWARE TECHNOLOGY

Article index—Volume 42

Number 1

SoftPM: a software process management system reconciling formalism with easiness
S.-Y. Min, H.-D. Lee and D.-H. Bae 1

An optimal representative set selection method
J. G. Lee and C. G. Chung 17

Software process and product improvement: an empirical assessment
N. Ashrafi 27

Distance-based software measurement: necessary and sufficient properties for software measures
G. Poels and G. Dedene 35

An empirical study of a software reuse reference model
D. C. Rine and N. Nada 47

Number 2

Special issue on constructing software engineering tools
J. P. Gray, A. Liu and L. Scott 71

Issues in software engineering tool construction
J. P. Gray, A. Liu and L. Scott 73

MetaMOOSE—an object-oriented framework for the construction of CASE tools
R. I. Ferguson, N. F. Parrington, P. Dunne, C. Hardy, J. M. Archibald, J. B. Thompson 79

Connecting architecture reconstruction frameworks
I. T. Bowman, M. W. Godfrey and R. C. Holt 91

Cognitive support, UML adherence, and XMI interchange in Argo/UML
J. E. Robbins and D. F. Redmiles 103

Constructing component-based software engineering environments: issues and experiences
J. Grundy, W. Mugridge and J. Hosking 117

Generating tools from graph-based specifications
D. Jäger 129

A multi-layer multi-view architecture for software engineering environments
R. Kempkens, P. Rösch, L. Scott and J. Zettel 141

Number 3

The formal specification of ORN semantics
B. K. Ehlmann, N. Rische and J. Shi 159

Designing a distributed database on a local area network: a methodology and decision support system
H. Lee, Y.-K. Park, G. Jang and S.-Y. Huh 171

An effective recovery under fuzzy checkpointing in main memory databases
S. K. Woo, M. H. Kim and Y. J. Lee 185

Translating update operations from relational to object-oriented databases
X. Zhang and J. Fong 197

A business object-oriented environment for CCISs interoperability
Z. Maamar and R. Charpentier 213

Number 4

Path-based protocol verification approach
W.-C. Liu and C.-G. Chung 231

Symbolic path-based protocol verification
W.-C. Liu and C.-G. Chung 247

Implementation and modeling of two-phase locking concurrency control—a performance study
N. B. Al-Jumah, H. S. Hassanein and M. El-Sharkawi 259

MOOV++: modular object-oriented VDM
Q. Charatan 277

Dynamic partitioning of complex process models
A. Fuggetta and M. L. Jaccheri 283

Number 5

Knowledge based information integration systems
N. W. Paton, C. A. Goble and S. Bechhofer 299

A decision-making pattern for guiding the enterprise knowledge development process
C. Rolland, S. Nurcan and G. Grosz 313

Knowledge based evaluation of software systems: a case study
I. Stamelos, I. Vlahavas, I. Refanidis and A. Tsoukiàs 333

LOD: A C++ extension for OODBMSs with orthogonal persistence to class hierarchies
E.-S. Cho and H.-J. Kim 347

Towards modeling the query processing relevant shape complexity of 2D polygonal spatial objects
N. (Kweku-Muata) Bryson and A. Mobolurin 357

Number 6

An empirical study of object-oriented system evolution
W. Li, L. Etzkorn, C. Davis and J. Talburt 373

OO-CASE tools: an evaluation of Rose
G. Post and A. Kagan 383

An extensible platform for the development of synchronous groupware

G. Licea and J. Favela 389
A data abstraction approach for query relaxation
S.-Y. Huh, K.-H. Moon and H. Lee 407
Requirements engineering: making the connection between the software developer and customer
H. Saiedian and R. Dale 419
Implementation of an efficient requirements-analysis supporting system using similarity measure techniques
S. Park, H. Kim, Y. Ko and J. Seo 429

Number 7
Multi-level transaction model for semantic concurrency control in linear hash structures
S. K. Madria, M. A. Tubaishat and B. Bhargava 445
Statistical analysis of deviation of actual cost from estimated cost using actual project data
O. Mizuno, T. Kikuno, K. Inagaki, Y. Takagi and K. Sakamoto 465
Translating hierarchical predicate transition nets to CC++ programs
X. He 475
Evaluation of Workflow-type software products: a case study
M. Pérez and T. Rojas 489
A framework and test-suite for assessing approaches to resolving heterogeneity in distributed databases
H. T. El-Khatib, M. H. Williams, L. M. MacKinnon and D. H. Marwick 505

Number 8
Semantic-based locking technique in object-oriented databases
W. Jun 523
Bayesian probability distributions for assessing measurement of subjective software attributes
J. Moses 533
An operational approach to the design of workflow systems
R. Agarwal, G. Bruno and M. Torchiano 547
The evaluation of access costs in object databases
K. Watkins, M. Woodman and D. Ince 557
A methodology for transforming inheritance relationships in an object-oriented conceptual model to relational tables
J. W. Rahayu, E. Chang, T. S. Dillon and D. Taniar 571

Number 9
An adaptable constrained locking protocol for high data contention environments: correctness and performance
S. Goel, B. Bhargava and S. K. Madria 599
Component mining: a process and its pattern language
D. Spinellis and K. Raptis 609
Deriving protocols for services supporting mobile users
M. Kapus-Kolar 619
Natural language and message sequence chart representation of use cases
L. M. G. Feijs 633
An empirical analysis of function point adjustment factors
C. J. Lokan 649

Number 10
Principles for modeling language design
R. F. Paige, J. S. Ostroff and P. J. Brooke 665
ROCS: an object-oriented class-level testing system based on the Relevant Observable ContextS technique
H. Y. Chen, T. H. Tse and Y. T. Deng 677
A study of development and maintenance in Norway: assessing the efficiency of information systems support using functional maintenance
K. K. Holgeid, J. Krogstie and D. I. K. Sjøberg 687
Neuro-genetic prediction of software development effort
K. K. Shukla 701
Assessing organisational obstacles to component-based development: a case study approach
D. Kunda and L. Brooks 715

Number 11
Using genetic algorithms to work out index configurations for the class-hierarchy indexing in object databases
H.-J. Song, J.-H. Ahn and H.-J. Kim 731
Proposing an information flow analysis model to measure memory load for software development
T. C. Du, C. J. Lin and C.-G. Liu 743
The financial profile of the software industry between 1980 and 1994
P. D. Chatzoglou and N. Vafeas 755
Dynamic data flow analysis for Java programs
A. S. Boujarwah, K. Saleh and J. Al-Dallal 765
Query language approach based on the deductive object-oriented database paradigm
T. Niemi, M. Christensen and K. Järvelin 777

Number 12
Introduction to the special issue on: model-based statistical testing of software intensive systems
797
Improving software quality using statistical testing techniques
D. P. Kelly and R. S. Oshana 801
Improving a product with usage-based testing
A. Kouchakdjian and R. Fietkiewicz 809
Applying models in your testing process
S. Rosaria and H. Robinson 815
A constraint-based approach to the representation of software usage models
J. H. Poore, G. H. Walton and J. A. Whittaker 825
TML: a description language for Markov chain usage models
S. J. Prowell 835
Partition testing with usage models
K. Sayre and J. H. Poore 845
Stopping criteria for statistical testing
K. Sayre and J. H. Poore 851
Measuring complexity and coverage of software specifications
G. H. Walton and J. H. Poore 859
Representation and optimization of software usage models with non-Markovian state transitions
K. Doerner and W. J. Gutjahr 873
A Markov chain model for predicting the reliability of multi-build software
J. A. Whittaker, K. Rekab and M. G. Thomason 889

Number 13
Identifying relevant constraints for semantic query optimization
S.-G. Lee, L. J. Henschen, J. Chun and T. Lee 899
Performance comparison of CORBA and RMI
M. B. Juric, I. Rozman and M. Hericko 915

Analyzing dependence locality for efficient construction of program dependence graph
F. Ohata, A. Nishimatsu and K. Inoue 935
A survey of lead-time challenges in the development and evolution of distributed real-time systems
L. Bratthall, P. Runeson, K. Adelswärd and W. Eriksson 947

Number 14

Software project control and metrics
K. D. Maxwell and R. J. Kusters 963
From process improvement to people improvement: enabling learning in software development
R. van Solingen, E. Berghout, R. Kusters and J. Trienekens 965
Design of a product-focused customer-oriented process
J. Elliott 973
Subjective evaluation as a tool for learning from software project success
C. Wohlin, A. von Mayrhauser, M. Höst and B. Regnell 983
Integration of functional, cognitive and quality requirements. A railways case study
M. Felici, M.-A. Sujan and M. Wimmer 993
Using simulation to analyse the impact of software requirement volatility on project performance
D. Pfahl and K. Lebsanft 1001
A comparative study of two software development cost modeling techniques using multi-organizational and company-specific data
R. Jeffery, M. Ruhe and I. Wieczorek 1009

Number 15

QoS-based evaluation of file systems and distributed system services for continuous media provisioning
W. Lee, D. Su and J. Srivastava 1021
Strategies and visualization tools for enhancing user auditing of spreadsheet models
H. C. Chan, C. Ying and C. B. Peh 1037
The development of OCPL, object conceptual prototyping language
A. E. James and S. D. E. Shipley 1045
Enhanced ER to relational mapping and interrelational normalization
M. Kolp and E. Zimányi 1057

Keyword Index – Volume 42

Abstraction database
A data abstraction approach for query relaxation 407
Abstraction hierarchy
A data abstraction approach for query relaxation 407
Access
The evaluation of access costs in object databases 557
Accuracy comparison
A comparative study of two software development cost modeling techniques using multi-organizational and company-specific data 1009
Approximate query
A data abstraction approach for query relaxation 407
Analogy-based estimation
A comparative study of two software development cost modeling techniques using multi-organizational and company-specific data 1009
Architecture reconstruction
Connecting architecture reconstruction frameworks 91
Auditing strategy
Strategies and visualization tools for enhancing user auditing of spreadsheet models 1037
Automated service-based protocol derivation
Deriving protocols for services supporting mobile users 619
Automated software evaluation
Knowledge based evaluation of software systems: a case study 333
Axiomatic approach
Distance-based software measurement: necessary and sufficient properties for software measures 35

Bayesian inference
Bayesian probability distributions for assessing measurement of subjective software attributes 533
Business and engineering processes
Dynamic partitioning of complex process models 283
Business objects
A business-oriented environment for CCISs interoperability 213

C++
LOD: A C++ extension for OODBMSs with orthogonal persistence to class hierarchies 347
Change process
A decision-making pattern for guiding the enterprise knowledge development process 313
Class implementation
LOD: A C++ extension for OODBMSs with orthogonal persistence to class hierarchies 347
Class interface
LOD: A C++ extension for OODBMSs with orthogonal persistence to class hierarchies 347
Class-hierarchy index
Using genetic algorithms to work out index configurations for the class-hierarchy indexing in object databases 731
Class-level testing
ROCS: an object-oriented class-level testing system based on the Relevant Observable ContextS technique 677
Cleanroom
Improving software quality using statistical testing techniques 801
CMM
Software process and product improvement: an empirical assessment 27
CM server
QoS-based evaluation of file systems and distributed system services for continuous media provisioning 1021
Code mobility
A business-oriented environment for CCISs interoperability 213
Code-reuse
LOD: A C++ extension for OODBMSs with orthogonal persistence to class hierarchies 347
Cognitive support
Issues in software engineering tool construction 73
Cognitive support, UML adherence, and XMI interchange in Argo/UML 105
Cohesion
Bayesian probability distributions for assessing measurement of subjective software attributes 533

Command and control information system
A business-oriented environment for CCISs interoperability 213
Complexity
Measuring complexity and coverage of software specifications 859
Component-based development
Assessing organisational obstacles to component-based development: a case study approach 715
Component-based software architectures
Constructing component-based software engineering environments: issues and experiences 103
Component mining
Component mining: a process and its pattern language 609
Components
Issues in software engineering tool construction 73
Computer-aided software engineering
OO-CASE tools: an evaluation of Rose 383
Computer-aided software engineering tool
Enhanced ER to relational mapping and interrelational normalization 1057
Concurrency
Multi-level transaction model for semantic concurrency control in linear hash structures 445
Concurrency Control
Semantic-based locking technique in object-oriented databases 523
Concurrency control
Implementation and modeling of two-phase locking concurrency control—a performance study 259
Concurrency control algorithms
An adaptable constrained locking protocol for high data contention environments: correctness and performance 599
Concurrent OO programming
Translating hierarchical predicate transition nets to CC programs 475
Concurrent path
Path-based protocol verification approach 231
Consistency management
Constructing component-based software engineering environments: issues and experiences 103

PII: S0950-5849(00)00163-4

Constrained locking protocol
An adaptable constrained locking protocol for high data contention environments: correctness and performance 599
Continuous media
QoS-based evaluation of file systems and distributed system services for continuous media provisioning 1021
Convex constraints
A constraint-based approach to the representation of software usage models 825
Cooperative query answering
A data abstraction approach for query relaxation 407
CORBA
Performance comparison of CORBA and RMI 915
Cost modeling techniques
A comparative study of two software development cost modeling techniques using multi-organizational and company-specific data 1009
Customer satisfaction
Design of a product-focused customer-oriented process 973

Database
Knowledge based information integration systems 299
Database recovery
An effective recovery under fuzzy checkpointing in main memory databases 185
Data interchange
Issues in software engineering tool construction 73
Data modeling
The formal specification of ORN semantics 159
Decision making
A decision-making pattern for guiding the enterprise knowledge development process 313
Decision support system
Designing a distributed database on a local area network: a methodology and decision support system 171
A data abstraction approach for query relaxation 407
Deductive database
Identifying relevant constraints for semantic query optimization 899
Deductive object-oriented databases
Query language approach based on the deductive object-oriented database paradigm 777
Description language
TML: a description language for Markov chain usage models 835
Design reusability
An extensible platform for the development of synchronous groupware 389
Deviation of cost estimate
Statistical analysis of deviation of actual cost from estimated cost using actual project data 465
Direct and indirect measurement scales
Bayesian probability distributions for assessing measurement of subjective software attributes 533
Distributed database
Designing a distributed database on a local area network: a methodology and decision support system 171
Knowledge based information integration systems 299
Distributed databases
A framework and test-suite for assessing approaches to resolving heterogeneity in distributed databases 505
Distributed service implementation
Deriving protocols for services supporting mobile users 619
Distributed systems
A survey of lead-time challenges in the development and evolution of distributed real-time systems 947
Distribution
Knowledge based information integration systems 299
Domain modeling
An operational approach to the design of workflow systems 547
Dynamic data flow analysis
Dynamic data flow analysis for Java programs 765

Empirical assessment
Software process and product improvement: an empirical assessment 27
Enterprise knowledge engineering
A decision-making pattern for guiding the enterprise knowledge development process 313
Equivalent terms
ROCS: an object-oriented class-level testing system based on the Relevant Observable ContextS technique 677
ER+ model
Enhanced ER to relational mapping and interrelational normalization 1057
Exchange format
Connecting architecture reconstruction frameworks 91

File and workload allocation
Designing a distributed database on a local area network: a methodology and decision support system 171
File system
QoS-based evaluation of file systems and distributed system services for continuous media provisioning 1021
Financial ratio analysis
The financial profile of the software industry between 1980 and 1994 755
First-come-first-served
Implementation and modeling of two-phase locking concurrency control—a performance study 259
Formal methods
The formal specification of ORN semantics 159
MOOV++: modular object-oriented VDM 277
Framework
MetaMOOSE—an object-oriented framework for the construction of CASE tools 79
An extensible platform for the development of synchronous groupware 389
Functional maintenance
A study of development and maintenance in Norway: assessing the efficiency of information systems support using functional maintenance 687
Function points
An empirical analysis of function point adjustment factors 649
Fundamental pairs
ROCS: an object-oriented class-level testing system based on the Relevant Observable ContextS technique 677
Fuzzy checkpointing
An effective recovery under fuzzy checkpointing in main memory databases 185

Generation of tools
Generating tools from graph-based specifications 129
Genetic algorithm
Using genetic algorithms to work out

index configurations for the class-hierarchy indexing in object databases 731
Genetically trained neural network
Neuro-genetic prediction of software development effort 701
Graph-based specification
Generating tools from graph-based specifications 129
Groupware
An extensible platform for the development of synchronous groupware 389
Guidance
A decision-making pattern for guiding the enterprise knowledge development process 313

Heterogeneous databases
A framework and test-suite for assessing approaches to resolving heterogeneity in distributed databases 505
Heuristics
Identifying relevant constraints for semantic query optimization 899
High data contention environments
An adaptable constrained locking protocol for high data contention environments: correctness and performance 599
High-level Petri nets
Translating hierarchical predicate transition nets to CC programs 475
Human factors
Integration of functional, cognitive and quality requirements. A railways case study 993
Hybrid logging
An effective recovery under fuzzy checkpointing in main memory databases 185

Inclusion normal form
Enhanced ER to relational mapping and interrelational normalization 1057
Information systems
Evaluation of Workflow-type software products: a case study 489
The evaluation of access costs in object databases 557
Inheritance relationships
A methodology for transforming inheritance relationships in an object-oriented conceptual model to relational tables 571
Instrumentation
Dynamic data flow analysis for Java programs 765
Integration of deductive and object-oriented aspects
Query language approach based on the deductive object-oriented database paradigm 777
Intelligent systems
Knowledge based evaluation of software systems: a case study 333
Interoperability
A business-oriented environment for CCISs interoperability 213
IsA relationships
LOD: A C++ extension for OODBMSs with orthogonal persistence to class hierarchies 347
ISO-9000
Software process and product improvement: an empirical assessment 27

Java
Dynamic data flow analysis for Java programs 765
Performance comparison of CORBA and RMI 915

Key players
Requirements engineering: making the connection between the software developer and customer 419
Knowledge based
The development of OCPL, object conceptual prototyping language 1045
Knowledge based system
Knowledge based information integration systems 299
Knowledge management
From process improvement to people improvement: enabling learning in software development 965
Kullback discriminant
Stopping criteria for statistical testing 851

Lead-time
A survey of lead-time challenges in the development and evolution of distributed real-time systems 947
Learning
From process improvement to people improvement: enabling learning in software development 965
Linear hash structure
Multi-level transaction model for semantic concurrency control in linear hash structures 445
Linking databases
A framework and test-suite for assessing approaches to resolving heterogeneity in distributed databases 505
Local area network
Designing a distributed database on a local area network: a methodology and decision support system 171
Local processing overhead
Designing a distributed database on a local area network: a methodology and decision support system 171
LOTOS
Deriving protocols for services supporting mobile users 619
Lotus Domino/Notes
Evaluation of Workflow-type software products: a case study 489

Main memory databases
An effective recovery under fuzzy checkpointing in main memory databases 185
Markov chains
A constraint-based approach to the representation of software usage models 825
Measuring complexity and coverage of software specifications 859
Representation and optimization of software usage models with non-Markovian state transitions 873
Markov chain model
Partition testing with usage models 845
Markov usage model
Representation and optimization of software usage models with non-Markovian state transitions 873
Measure validation
Distance-based software measurement: necessary and sufficient properties for software measures 35
Memory load
Proposing an information flow analysis model to measure memory load for software development 743
MetaCASE
Issues in software engineering tool construction 73
MetaMOOSE—an object-oriented framework for the construction of CASE tools 79
Message sequence charts
Natural language and message sequence chart representation of use cases 633

Microsoft Exchange
Evaluation of Workflow-type software products: a case study 489
Model-based testing
Applying models in your testing process 815
Modeling languages
Dynamic partitioning of complex process models 283
Principles for modeling language design 665
Multi-level transaction
Multi-level transaction model for semantic concurrency control in linear hash structures 445
Multiple criteria decision aid
Knowledge based evaluation of software systems: a case study 333
Multiple views
Constructing component-based software engineering environments: issues and experiences 103
Multithreading
Multi-level transaction model for semantic concurrency control in linear hash structures 445
Multi-view architecture
A multi-layer multi-view architecture for software engineering environments 141

Natural language
Natural language and message sequence chart representation of use cases 633
Natural language processing
Implementation of an efficient requirements-analysis supporting system using similarity measure techniques 429
Neural network predictor
Neuro-genetic prediction of software development effort 701
Neuro-genetic prediction
Neuro-genetic prediction of software development effort 701
Nonlinear integer programming
Designing a distributed database on a local area network: a methodology and decision support system 171
Normalization theory
Enhanced ER to relational mapping and interrelational normalization 1057

Object conceptual modeling
A methodology for transforming inheritance relationships in an object-oriented conceptual model to relational tables 571
Object database
Using genetic algorithms to work out index configurations for the class-hierarchy indexing in object databases 731
Object databases
The evaluation of access costs in object databases 557
Object orientation
MetaMOOSE—an object-oriented framework for the construction of CASE tools 79
Dynamic partitioning of complex process models 283
OO-CASE tools: an evaluation of Rose 383
Object-oriented
Multi-level transaction model for semantic concurrency control in linear hash structures 445
The development of OCPL, object conceptual prototyping language 1045
Object-oriented database
Semantic-based locking technique in object-oriented databases 523
Object-oriented database programming language
LOD: A C++ extension for OODBMSs with orthogonal persistence to class hierarchies 347
Object-oriented design evolution
An empirical study of object-oriented system evolution 373
Object-oriented development
MOOV++: modular object-oriented VDM 277
Object-oriented implementation evolution
An empirical study of object-oriented system evolution 373
Object-oriented metrics
An empirical study of object-oriented system evolution 373
Object-oriented model
Translating update operations from relational to object-oriented databases 197
Object-oriented system
Natural language and message sequence chart representation of use cases 633
Object-oriented testing
ROCS: an object-oriented class-level testing system based on the Relevant Observable ContextS technique 677
Object-Relational transformation methodology
A methodology for transforming inheritance relationships in an object-oriented conceptual model to relational tables 571
Object relationship notation
The formal specification of ORN semantics 159
Observational equivalence
ROCS: an object-oriented class-level testing system based on the Relevant Observable ContextS technique 677
Ontology
Knowledge based information integration systems 299
Open-source software
Cognitive support, UML adherence, and XMI interchange in Argo/UML 105
Operational approach
An operational approach to the design of workflow systems 547
Optimal representative set
An optimal representative set selection method 17
Optimization
Measuring complexity and coverage of software specifications 859
Ordinary least-squares regression
A comparative study of two software development cost modeling techniques using multi-organizational and company-specific data 1009
Organisational obstacles
Assessing organisational obstacles to component-based development: a case study approach 715

Partition index configuration scheme
Using genetic algorithms to work out index configurations for the class-hierarchy indexing in object databases 731
Partition testing
Partition testing with usage models 845
Path-based approach
Symbolic path-based protocol verification 247
Path-based verification
Path-based protocol verification approach 231
Path coverage
Measuring complexity and coverage of software specifications 859
Pattern language
Component mining: a process and its pattern language 609

People
From process improvement to people improvement: enabling learning in software development 965
Performance analysis
Performance comparison of CORBA and RMI 915
Performance evaluation
A methodology for transforming inheritance relationships in an object-oriented conceptual model to relational tables 571
Performance modelling
The evaluation of access costs in object databases 557
Probability distribution
Bayesian probability distributions for assessing measurement of subjective software attributes 533
Process-centered software engineering environment
SoftPM: a software process management system reconciling formalism with easiness 1
Process design
Design of a product-focused customer-oriented process 973
Process improvement
From process improvement to people improvement: enabling learning in software development 965
Process modeling
A multi-layer multi-view architecture for software engineering environments 141
Process modelling
Issues in software engineering tool construction 73
Product quality
Design of a product-focused customer-oriented process 973
Program dependence graph
Analyzing dependence locality for efficient construction of program dependence graph 935
Program slice
Analyzing dependence locality for efficient construction of program dependence graph 935
Program understanding
Connecting architecture reconstruction frameworks 91
Project characteristic
Subjective evaluation as a tool for learning from software project success 983
Project classification
Subjective evaluation as a tool for learning from software project success 983
Project plan
Statistical analysis of deviation of actual cost from estimated cost using actual project data 465
Project support environment
A multi-layer multi-view architecture for software engineering environments 141
Protocol verification
Path-based protocol verification approach 231
Symbolic path-based protocol verification 247

Qualitative analysis
Proposing an information flow analysis model to measure memory load for software development 743
Quality and productivity
Statistical analysis of deviation of actual cost from estimated cost using actual project data 465
Quality factors
Software process and product improvement: an empirical assessment 27
Quality of service
QoS-based evaluation of file systems and distributed system services for continuous media provisioning 1021
Query formulation
Query language approach based on the deductive object-oriented database paradigm 777
Query languages
Query language approach based on the deductive object-oriented database paradigm 777
Query processing
Identifying relevant constraints for semantic query optimization 899
Towards modeling the query processing relevant shape complexity of 2D polygonal spatial objects 357
Query translation
Translating update operations from relational to object-oriented databases 197

Random test automation
Applying models in your testing process 815
Reachability analysis
Symbolic path-based protocol verification 247
Real-time
A survey of lead-time challenges in the development and evolution of distributed real-time systems 947
Reference model
An empirical study of a software reuse reference model 47
Translating update operations from relational to object-oriented databases 197
Relational databases
A methodology for transforming inheritance relationships in an object-oriented conceptual model to relational tables 571
Relational model
Enhanced ER to relational mapping and interrelational normalization 1057
Relevant observable contexts
ROCS: an object-oriented class-level testing system based on the Relevant Observable ContextS technique 677
Repository
Connecting architecture reconstruction frameworks 91
Requirements engineering
Implementation of an efficient requirements-analysis supporting system using similarity measure techniques 429
Integration of functional, cognitive and quality requirements. A railways case study 993
Requirements specification
Requirements engineering: making the connection between the software developer and customer 419
Requirements engineering: making the connection between the software developer and customer 419
Reuse
An empirical study of a software reuse reference model 47
Component mining: a process and its pattern language 609
Reuse practice
An empirical study of a software reuse reference model 47
RMI
Performance comparison of CORBA and RMI 915

Semantic query optimization
Identifying relevant constraints for semantic query optimization 899
Server service capacity
Designing a distributed database on a local area network: a methodology and decision support system 171

Services for mobile users
Deriving protocols for services supporting mobile users 619
Shape complexity
Towards modeling the query processing relevant shape complexity of 2D polygonal spatial objects 357
Similarity measurements
Implementation of an efficient requirements-analysis supporting system using similarity measure techniques 429
Simulation
Semantic-based locking technique in object-oriented databases 523
Social-technical approaches
Assessing organisational obstacles to component-based development: a case study approach 715
Software analysis
Implementation of an efficient requirements-analysis supporting system using similarity measure techniques 429
Software business management
The financial profile of the software industry between 1980 and 1994 755
Software cost estimation
An empirical analysis of function point adjustment factors 649
A comparative study of two software development cost modeling techniques using multi-organizational and company-specific data 1009
Software dependability
Representation and optimization of software usage models with non-Markovian state transitions 873
Software development
Proposing an information flow analysis model to measure memory load for software development 743
From process improvement to people improvement: enabling learning in software development 965
Software development project
Statistical analysis of deviation of actual cost from estimated cost using actual project data 465
Software engineering
Integration of functional, cognitive and quality requirements. A railways case study 993
Software engineering environment
A multi-layer multi-view architecture for software engineering environments 141
Software failure
A Markov chain model for predicting the reliability of multi-build software 889
Software maintenance
A study of development and maintenance in Norway: assessing the efficiency of information systems support using functional maintenance 687
Software metric
Distance-based software measurement: necessary and sufficient properties for software measures 35
Software metrics
An empirical analysis of function point adjustment factors 649
Software modelling
SoftPM: a software process management system reconciling formalism with easiness 1
Software pattern
An extensible platform for the development of synchronous groupware 389
Software process
SoftPM: a software process management system reconciling formalism with easiness 1
Software process improvement
Software process and product improvement: an empirical assessment 27
Using simulation to analyse the impact of software requirement volatility on project performance 1001
Software reliability model
A Markov chain model for predicting the reliability of multi-build software 889
Software requirement volatility
Using simulation to analyse the impact of software requirement volatility on project performance 1001
Software reuse
An empirical study of a software reuse reference model 47
Software success
Subjective evaluation as a tool for learning from software project success 983
Software systems
Design of a product-focused customer-oriented process 973
Software testing
Dynamic data flow analysis for Java programs 765
Representation and optimization of software usage models with non-Markovian state transitions 873
A Markov chain model for predicting the reliability of multi-build software 889
Software usage models
A constraint-based approach to the representation of software usage models 825
TML: a description language for Markov chain usage models 835
Representation and optimization of software usage models with non-Markovian state transitions 873
Spatial database
Towards modeling the query processing relevant shape complexity of 2D polygonal spatial objects 357
Spreadsheet error detection
Strategies and visualization tools for enhancing user auditing of spreadsheet models 1037
State transitions
Applying models in your testing process 815
Statistical analysis
Improving a product with usage-based testing 809
Statistical testing
Stopping criteria for statistical testing 851
Measuring complexity and coverage of software specifications 859
Statistical usage
Statistical analysis of deviation of actual cost from estimated cost using actual project data 465
Stopping criteria
Stopping criteria for statistical testing 851
Structure-oriented software engineering tools
Generating tools from graph-based specifications 129
Subjective evaluation
Subjective evaluation as a tool for learning from software project success 983
Survey investigation
A study of development and maintenance in Norway: assessing the efficiency of information systems support using functional maintenance 687
System dynamics
Using simulation to analyse the impact of software requirement volatility on project performance 1001
System measurement
Design of a product-focused customer-oriented process 973

System modeling
An operational approach to the design of workflow systems 547
Systems design
OO-CASE tools: an evaluation of Rose 383
Systems representation
The development of OCPL, object conceptual prototyping language 1045
Systems generation
The development of OCPL, object conceptual prototyping language 1045

Task automation
Constructing component-based software engineering environments: issues and experiences 103
Testing
An optimal representative set selection method 17
Test suite reduction
An optimal representative set selection method 17
Three-tier client/server
Multi-level transaction model for semantic concurrency control in linear hash structures 445
Tool architectures
Issues in software engineering tool construction 73
Tool integration
Constructing component-based software engineering environments: issues and experiences 103
Transaction-processing model
Implementation and modeling of two-phase locking concurrency control—a performance study 259
Translation
Translating hierarchical predicate transition nets to CC++ programs 475
Two-phase locking
Implementation and modeling of two-phase locking concurrency control—a performance study 259

UML
Cognitive support, UML adherence, and XMI interchange in Argo/UML 105
Principles for modeling language design 665
Unification
Principles for modeling language design 665
Unix tools
Component mining: a process and its pattern language 609
Update translation
Translating update operations from relational to object-oriented databases 197
Usage-based statistical testing
Improving software quality using statistical testing techniques 801
Improving a product with usage-based testing 809
Usage model
TML: a description language for Markov chain usage models 835
Partition testing with usage models 845
Measuring complexity and coverage of software specifications 859

Vienna development method
MOOV++: modular object-oriented VDM 277
Visualization tool
Strategies and visualization tools for enhancing user auditing of spreadsheet models 1037

Workflow
A business-oriented environment for CCISs interoperability 213
Dynamic partitioning of complex process models 283
Workflow evaluation
Evaluation of Workflow-type software products: a case study 489
Workflow software
Evaluation of Workflow-type software products: a case study 489
Workflow systems
An operational approach to the design of workflow systems 547

XMI
Cognitive support, UML adherence, and XMI interchange in Argo/UML 105

Year 2000
A study of development and maintenance in Norway: assessing the efficiency of information systems support using functional maintenance 687
